

**SENATE, No. 3260**

---

**STATE OF NEW JERSEY**  
**216th LEGISLATURE**

---

INTRODUCED DECEMBER 7, 2015

**Sponsored by:**

**Senator LINDA R. GREENSTEIN**

**District 14 (Mercer and Middlesex)**

**SYNOPSIS**

Establishes energy efficiency standards for battery chargers.

**CURRENT VERSION OF TEXT**

As introduced.

1 AN ACT concerning energy efficiency standards for battery  
2 chargers, and supplementing Title 48 of the Revised Statutes.

3

4 **BE IT ENACTED** by the Senate and General Assembly of the State  
5 of New Jersey:

6

7 1. As used in this act:

8 “Battery” or “battery pack” means an assembly of one or more  
9 rechargeable cells intended to provide electrical energy to a  
10 consumer product, and which may be a detachable battery that is a  
11 battery contained in a separate enclosure from the consumer product  
12 and is intended to be removed or disconnected from the consumer  
13 product for recharging, or an integral battery that is a battery  
14 contained within the consumer product and is not removed from the  
15 consumer product for charging purposes.

16 “Battery capacity” means the electric output of a cell or battery  
17 on a service test delivered before the cell reaches a specified final  
18 electrical condition and may be expressed in ampere-hours, watt-  
19 hours, or similar units. The capacity in watt-hours is equal to the  
20 capacity in ampere-hours multiplied by the battery voltage.

21 “Battery charger” means a device that delivers electrical energy  
22 in the form of a charge to a battery or battery pack used to power a  
23 consumer product. “Battery charger” includes, but is not  
24 necessarily limited to, battery charger systems and the following  
25 devices and systems: electronic devices with a battery that are  
26 normally charged from alternating current line voltage or direct  
27 current input voltage through an internal or external power supply  
28 and a dedicated battery charger; battery and battery charger  
29 components of devices that are designed to run on battery power  
30 during part or all of their operations; dedicated battery systems  
31 primarily designed for electrical or emergency backup; devices  
32 whose primary function is to charge batteries, along with the  
33 batteries they are designed to charge, including chargers for power  
34 tool batteries, chargers for automotive, AA, AAA, C, D, or 9V  
35 rechargeable batteries, and chargers for batteries used in larger  
36 industrial motive equipment; and charging circuitry of battery  
37 charger systems that may or may not be located within the housing  
38 of the end-use device itself and any dedicated external charger and  
39 power supply combination that is separate from the device that runs  
40 on the power from the battery.

41 “Board” means the Board of Public Utilities.

42 “Charge return factor” or “Crf” means the measure of the amount  
43 of energy applied to the battery versus the amount of energy  
44 extracted from the battery, and the energy losses occurring in the  
45 battery during charging.

46 “Consumer product” means a product that functions with the use  
47 of a battery or battery pack which is distributed in commerce for  
48 personal use or consumption by individuals in a variety of settings.

1       “DOD” means depth of discharge.

2       “Inductive battery charger” means a battery charger that transfers  
3 power from mains to the charger through magnetic or electric  
4 induction.

5       “Large battery charger” means a battery charger that draws peak  
6 power of two kilowatts or more.

7       “Maintenance power” means the amount of power the charger  
8 draws to keep a battery at full charge.

9       “No battery power” means the amount of power the charger  
10 draws when no battery is attached and the charger is in standby  
11 mode.

12       “Non-consumer battery charger” means a battery charger, which  
13 is used primarily in commercial settings for products other than  
14 consumer products.

15       “Power conversion efficiency” means the efficiency in the  
16 battery charger for converting high voltage alternating current into  
17 lower voltage direct current and the measurement of losses  
18 occurring in the circuitry during charging.

19       “Power factor” means the measure of how well the charger is  
20 able to synchronize with the power utility’s 60-Hertz cycle,  
21 expressed as a ratio of the real power to the apparent power.

22       “Small battery charger” means a battery charger that draws peak  
23 power of less than two kilowatts.

24       “Standby mode” means the mode of operation when the battery  
25 charger is connected to the main electricity supply and the battery is  
26 not connected to the charger.

27

28       2. a. Within one year after the effective date of this act, the  
29 Board of Public Utilities, in consultation with the Commissioner of  
30 Environmental Protection, shall adopt, pursuant to the  
31 "Administrative Procedure Act," P.L.1968, c.410 (C.52:14B-1 et  
32 seq.), rules and regulations establishing minimum energy efficiency  
33 standards for battery chargers sold in the State. The rules and  
34 regulations shall establish the minimum efficiency standards for  
35 inductive battery chargers, large battery chargers, and small battery  
36 chargers as follows:

37       (1) Large battery chargers manufactured on or after July 1, 2016  
38 shall meet the applicable performance values for large battery  
39 chargers with 100 to 80 DOD percent or a 40 DOD percent cycle  
40 performance as specified in this paragraph. The performance value  
41 for the charge return factor shall be a Crf of less than or equal to  
42 1.10 for a 100 to 80 DOD percent large battery charger, and less  
43 than or equal to a Crf of 1.15 for a 40 DOD percent large battery  
44 charger. For both DOD percent large battery chargers, the power  
45 conversion efficiency shall be greater than or equal to 89 percent;  
46 the power factor shall be greater than or equal to 0.95; the  
47 maintenance power shall be less than or equal to 10 watts; and the  
48 no battery power shall be less than or equal to 10 watts;

1 (2) Except as provided in paragraph (3) of this subsection, small  
2 battery chargers manufactured on or after the effective date of this  
3 act shall meet the performance standards set forth in this paragraph.  
4 The 24-hour charge and maintenance energy watt-hour performance  
5 standard shall be less than or equal to  $12 + 1.6(\text{battery capacity})$ .  
6 The maintenance power performance standard shall be less than or  
7 equal to 0.5 watts. The no battery power performance standard  
8 shall be less than or equal to 0.3 watts; and the power factor  
9 standard shall be dependent upon the input current;

10 (3) A small battery charger that is made available directly to a  
11 consumer or to a service or repair facility after and separate from  
12 the original sale of the product that requires the battery charger as a  
13 service part or spare part shall not be required to meet the small  
14 battery charger standards set forth in paragraph (2) of this  
15 subsection until July 1, 2017; and

16 (4) Inductive battery chargers manufactured on or after the  
17 effective date of this act shall meet the applicable performance  
18 values set forth in paragraph (2) of this subsection for small battery  
19 chargers, or shall use less than one watt in 24-hour charge and  
20 maintenance energy watt-hours, maintenance power performance  
21 standard, and no battery power performance, or both, as determined  
22 by the board.

23 b. The board, pursuant to the "Administrative Procedure Act,"  
24 P.L.1968, c.410 (C.52:14B-1 et seq.) and in consultation with the  
25 Commissioner of Environmental Protection, may modify and revise  
26 the standards established in subsection a. of this section as it finds  
27 necessary and prudent. When making such modifications and  
28 revisions, the board shall consult, and avail itself of, the most recent  
29 information concerning energy efficiency standards, including but  
30 not limited to, the recommendations of the California Energy  
31 Commission establishing minimum energy efficiency standards for  
32 battery chargers and any rules and regulations adopted pursuant  
33 thereto.

34  
35 3. a. Two years after the effective date of this act, no battery  
36 charger may be sold or offered for sale in the State unless the  
37 battery charger has:

38 (1) an energy efficiency that meets or exceeds the efficiency  
39 standards set forth in the rules and regulations adopted pursuant to  
40 section 2 of this act; and

41 (2) it is equipped with a charger sensor or switch that shuts off  
42 the flow of electricity through the charger once the battery has been  
43 fully charged.

44 b. The Board of Public Utilities, in consultation with the  
45 Commissioner of Environmental Protection, shall adopt, pursuant to  
46 the "Administrative Procedure Act," P.L.1968, c.410 (C.52:14B-1 et  
47 seq.):

1 (1) procedures for testing the energy efficiency of battery  
2 chargers sold in the State; and

3 (2) rules and regulations governing the certification of such  
4 products.

5 The board shall require the use of United States Department of  
6 Energy approved test methods, or in the absence of such test  
7 methods, other appropriate nationally recognized test methods. The  
8 board also may propose to work in coordination with the  
9 certification program of other states with similar standards.

10 c. Each manufacturer of battery chargers shall: (1) cause  
11 samples of its products to be tested in accordance with the test  
12 procedures adopted pursuant to this section before offering any  
13 battery charger for sale in the State; and (2) certify to the board that  
14 its product complies with the provisions of this act.

15 d. The board may test products using an accredited testing  
16 facility. If products so tested are found to not comply with the  
17 minimum efficiency standards established pursuant to section 2 of  
18 this act, the board shall: (1) charge the manufacturer of such  
19 products for the cost of product purchase and testing; and (2)  
20 provide information to the public on products found to not comply  
21 with the standards.

22

23 4. The provisions of this act shall not apply to any:

24 a. non-consumer battery charger;

25 b. battery charger or battery charger system used to charge  
26 highway vehicles; or

27 c. battery charger that is classified as a device for human use  
28 under the federal "Food, Drug, and Cosmetic Act," 21 U.S.C. s. 301  
29 et seq., and requires United States Food and Drug Administration  
30 listing and approval as a medical device.

31

32 5. The Board of Public Utilities, in consultation with the  
33 Commissioner of Environmental Protection, may cause periodic  
34 inspections to be made of distributors or retailers of battery  
35 chargers in order to determine compliance with the provisions of  
36 this act. The board shall also work with the Director of the Division  
37 of Consumer Affairs in the Department of Law and Public Safety to  
38 coordinate the inspections for battery chargers and consumer  
39 complaints concerning battery chargers.

40

41 6. a. The Board of Public Utilities, in consultation with the  
42 Commissioner of Environmental Protection and the Director of the  
43 Division of Consumer Affairs in the Department of Law and Public  
44 Safety, shall cause investigations to be made of complaints received  
45 concerning violations of this act and shall report the results of such  
46 investigations to the Attorney General. The Attorney General may  
47 institute proceedings to enforce the provisions of this act.

1       b. A manufacturer, distributor, or retailer who violates any  
2 provision of this act shall be issued a warning by the board for a  
3 first violation. Repeat violations shall be subject to a civil penalty  
4 of not more than \$250. Each violation of this act shall constitute a  
5 separate offense, and each day that the violation continues shall  
6 constitute a separate offense.

7       c. Penalties assessed under this act are in addition to costs  
8 assessed pursuant to subsection d. of section 3 of this act, and are to  
9 be collected by a summary proceeding under the "Penalty  
10 Enforcement Law of 1999," P.L.1999, c.274 (C.2A:58-10 et seq.).  
11 The Superior Court and the municipal court shall have jurisdiction  
12 to enforce the provisions of the "Penalty Enforcement Law of 1999"  
13 in connection with this act.

14

15       7. The Board of Public Utilities, in consultation with the  
16 Commissioner of Environmental Protection, may adopt, pursuant to  
17 the "Administrative Procedure Act," P.L.1968, c.410 (C.52:14B-1 et  
18 seq.), any further rules and regulations as may be necessary to  
19 implement the provisions of this act.

20

21       8. This act shall take effect immediately.

22

23

24

STATEMENT

25

26       This bill directs the Board of Public Utilities (BPU), in  
27 consultation with the Commissioner of Environmental Protection, to  
28 establish minimum energy efficiency standards for battery chargers  
29 sold in the State. Specifically, the bill provides for the minimum  
30 efficiency standards to be established by regulation, as specified in  
31 section 2 of the bill, for inductive battery chargers, large battery  
32 chargers, and small battery chargers, and also authorizes the BPU to  
33 modify and revise these standards as it deems necessary and  
34 prudent.

35       The bill prohibits the sale of battery chargers in the State that do  
36 not comply with the standards established by the bill beginning two  
37 years after the date of enactment of the bill into law.

38       Because of the technological explosion of the past 10 years,  
39 battery chargers and recharging systems are an essential and  
40 integral part of every household, needed to support the use of a  
41 wide array of devices that have become necessary to communicate  
42 and succeed in our society. However, these battery chargers have  
43 been identified as a large energy drain, wasting billions of kilowatt-  
44 hours of electricity annually. The California Energy Commission  
45 has estimated that, in California, battery chargers are estimated to  
46 use 8 billion kilowatt-hours per year but only deliver about 2.9  
47 billion of those kilowatt-hours to the batteries. The 5.1 billion  
48 kilowatt-hours that annually are not delivered to batteries represent

**S3260 GREENSTEIN**

7

1 a significant opportunity for annual energy savings – energy savings  
2 that translate into real cost savings for every household.  
3 Establishing and enforcing the energy efficiency standards as set  
4 forth in this bill is estimated to be able to capture almost half of this  
5 otherwise wasted energy. This wasted energy is sometimes referred  
6 to as “vampire energy.”
