Dear Mr. Rosen:

Please accept this letter in response to questions raised by members of the Senate Budget Committee during the Department of Community Affairs' April 15, 2009 budget hearing:

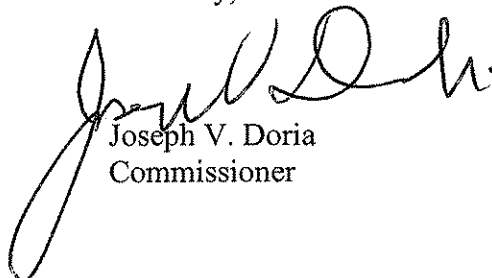

Please provide the committee with a chart that displays and describes the ranges of median per capita income, equalized property value per capita, and equalized municipal purposes property tax rate used to determine the proposed Fiscal Year 2010 reductions in combined Consolidated Municipal Property Tax Relief Aid and Energy Tax Receipts Property Tax Relief Aid for each municipality.

Please find the chart requested as Attachment A.

Please provide the committee with a copy of each report on violent crimes in certain types of project-based housing required pursuant to section 1 of P.L. 2003, c. 254 (C.52:27D-3.4).

Please find the reports requested as Attachments B, C, D and E.

Sincerely,

Joseph V. Doria
Commissioner

New Aid Model Summary

- 1) Each municipality is assessed by its 2008 Equalized Municipal Tax Rate and a Wealth measure.
- 2) Wealth measure is 50% per capita income and 50% Equalized Value Per Capita.
- 3) Each of the three measures is split into thirds...points are applied inversely – lower the stress, fewer points; higher stress, more points (i.e., low EVPC = more points; high per capita income = few points).
- 4) Based on the points for each muni, they are placed into one of squares on the grid.

Low-----Equalized Municipal Tax Rate-----High

Low-----Wealth Measure-----High	Low rate High income	Medium rate High income	High rate High Income
	Low rate Medium income	Medium rate Medium income	High rate Medium income
	Low rate Low income	Medium rate Low income	High rate Low income

- 5) The grid boxes were evaluated from high stress to low stress levels as follows:

Low stress-----High stress	High rate/low income
	Medium rate /low income
	Low rate/low income
	High rate/medium income
	Medium rate/Medium income
	Low rate/medium income
	High rate/high income
	Medium rate/high income
	Low rate/High income

- 6) Aid was reduced by a discount factor to each level. The current model starts with 95% of aid for highest stress level, then dropped by 5% for each level, down to 55% for the lowest.
- 7) Each municipal aid reduction was tested on the average residential taxes in that municipality. If the impact exceeded \$100 per residence, the aid reduction was reduced so the increase due to reduced aid was no more than \$100.
