# SENATE CONCURRENT RESOLUTION No. 60

## STATE OF NEW JERSEY

### 218th LEGISLATURE

**INTRODUCED FEBRUARY 1, 2018** 

**Sponsored by:** 

**Senator MICHAEL J. DOHERTY** 

**District 23 (Hunterdon, Somerset and Warren)** 

#### **SYNOPSIS**

Urges DOH to adopt rules permitting additional facilities to perform elective angioplasty procedures.

#### **CURRENT VERSION OF TEXT**

As introduced.

A CONCURRENT RESOLUTION urging DOH to promulgate rules to permit additional facilities to perform elective angioplasty procedures.

- WHEREAS, Angioplasty is a procedure used to treat clogged heart arteries, and involves temporarily inserting a tiny balloon that widens the artery and pushes away the plaque causing the blockage. Angioplasty may be accompanied by the insertion of a permanent stent that helps prop the artery open to prevent it from narrowing again; and
- WHEREAS, Angioplasties may be performed to restore blood flow in the heart in emergency situations, such as during a heart attack, or on an elective basis to remove blockages that may be causing pain or could present future health problems for the patient; and
- WHEREAS, In 2006, a cardiologist at Johns Hopkins University began the Cardiovascular Patient Outcomes Research Team Elective Angioplasty Study (C-PORT-E), to assess whether there is an increased risk of complications from elective angioplasties performed at hospitals without on-site cardiac surgery capabilities as compared with licensed cardiac surgery facilities; and
- WHEREAS, The C-PORT-E study tracked patient outcomes from elective angioplasties performed on more than 18,000 patients in 10 states; New Jersey authorized 11 non-cardiac surgery facilities to perform elective angioplasties under the study; and
- WHEREAS, In 2012, the results of the C-PORT-E study were published in the New England Journal of Medicine and presented at the annual meeting of the American College of Cardiology; the study concluded that there is no greater risk of death or complications when elective angioplasties are performed at non-cardiac surgery facilities as compared with licensed cardiac surgery facilities; and
- WHEREAS, Following the end of the C-PORT-E study, the New Jersey
  Department of Health (DOH) promulgated rules establishing a
  continuing demonstration project to be operated along the same
  parameters as applied to the C-PORT-E study, including allowing
  the 11 non-cardiac surgery facilities authorized to perform elective
  angioplasties under the C-PORT-E study to continue performing
  the procedures; and
- WHEREAS, Revisions to the demonstration project rules adopted in August 2015 indicate that the demonstration project will continue until DOH adopts new rules revising N.J.A.C.8:33E, concerning licensure requirements for cardiac treatment facilities, to permit licensure of additional elective angioplasty facilities; DOH has declined to permit additional non-cardiac surgery facilities to perform elective angioplasties until that time; and
- WHEREAS, As of October 2016, DOH has not published any proposed revisions to N.J.A.C.8:33E in the New Jersey Register or otherwise indicated that revisions to the rule, including proposals to expand

#### **SCR60** DOHERTY

the number of facilities authorized to perform elective angioplasties, are imminent; and **WHEREAS,** There are currently 29 facilities authorized to perform

WHEREAS, There are currently 29 facilities authorized to perform elective angioplasties in the State, including the 11 demonstration project facilities and 18 licensed cardiac surgery centers. However, these 29 facilities are located in just 14 of the State's 21 counties, and out of those 14, six counties, including Atlantic, Burlington, Mercer, Morris, Ocean, and Somerset Counties, have only one elective angioplasty facility. Seven counties, including Cape May, Cumberland, Gloucester, Hunterdon, Salem, Sussex, and Warren Counties, do not contain any elective angioplasty facilities; and

WHEREAS, Residents of counties that have either no elective angioplasty facilities or only one facility may be required to drive a long distance or travel to a neighboring state to undergo an elective angioplasty; and

**WHEREAS,** Permitting the licensure of additional elective angioplasty facilities, particularly in the regions of the State that have reduced or limited access to facilities licensed to perform the procedure, is essential to promoting good cardiac health for the citizens of New Jersey; now, therefore,

**BE IT RESOLVED** by the Senate of the State of New Jersey (the General Assembly concurring):

1. The Department of Health is respectfully urged to promulgate rules permitting the licensure of additional elective angioplasty facilities, particularly in counties and communities with limited access to a currently-licensed elective angioplasty facility.

2. Copies of this resolution, as filed with the Secretary of State, shall be transmitted by the Clerk of the General Assembly or the Secretary of the Senate to the Governor and to the Commissioner of Health.

#### STATEMENT

This resolution respectfully urges the Department of Health (DOH) to adopt rules permitting the licensure of additional elective angioplasty facilities. Angioplasty is a procedure used to widen clogged arteries and help remove blockages, restoring blood flow and potentially reducing the risk of an adverse cardiac event.

In 2012, the Cardiovascular Patient Outcomes Research Team Elective Angioplasty Study (C-PORT-E) concluded that there is no increased risk of death or complications from an elective angioplasty conducted at a facility that does not have cardiac surgery capabilities as compared with a licensed cardiac surgery facility. Following the end of the C-PORT-E study, DOH

#### **SCR60** DOHERTY

4

1 established a continuing demonstration program permitting the 11 State facilities that participated in the C-PORT-E study to continue 2 3 elective angioplasties; additionally, 4 angioplasties may currently be performed at any of the State's 18 licensed cardiac surgery centers. However, DOH has declined to 5 6 permit the licensure of additional elective angioplasty facilities until 7 it revises the current rules concerning licensure requirements for 8 cardiac treatment facilities and, as of October 2016, no proposed 9 revisions to these rules have been published in the New Jersey 10 Register.

Out of the 21 counties in the State, six counties currently have 11 12 only one facility licensed to perform elective angioplasties and 13 seven counties have no licensed elective angioplasty facilities. 14 Residents in these counties, which are primarily located in the 15 southern and northwestern regions of the State, may consequently 16 be required to travel a long distance or out of the State to receive an elective angioplasty, reducing access to a key tool in treating the 17 18 risks and symptoms of cardiac disease. It is the sponsor's belief 19 that promulgating rules permitting licensure of additional facilities 20 will help improve access to quality cardiac health care for the 21 citizens of New Jersey.
