Appendix I Assembly Bill No. 376

Appendix II Review Request for Assembly Bill No. 376
INTRODUCTION

The Mandated Health Benefits Advisory Commission (MHBAC) has been asked to review A376 (see Appendix I for a copy of the legislation), a bill that health insurers (health, hospital, and medical service corporations, commercial individual and group health insurers, health maintenance organizations, health benefits plans issued pursuant to the New Jersey Individual Health Coverage and Small Employer Health Benefits Programs, the State Health Benefits Program, not referencing the School Employees’ Health Benefits Program) to provide coverage for an “annual mental health screening.”

Specifically, A376 amends various parts of statutory law requiring health insurance coverage consistent with the Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act of 2008, 42 U.S.C. s.18031(j), and any amendments to, and federal guidance or regulations issued under that act, including 45 C.F.R. Parts 146 and 147 and 45 C.F.R. s.156.115(a)(3) to mental health parity under the federal by noting that such coverage “shall include, but not be limited to, an annual screening for mental health conditions.” The bill does not define what is intended by an “annual screening for mental health conditions.”

Coverage for preventive services and screening in commercial and self-funded health plans is also governed by federal laws. Specifically, the Patient Protection and Affordable Care Act (ACA), Section 2713, amending the Public Health Services Act, and implementing regulations, mandate coverage, requiring group health plans and health insurance issuers offering non-grandfathered group or individual health insurance coverage to provide coverage of certain preventive services. For purposes of screening, the ACA requires coverage of evidence-based items or services that have an “A” or “B” recommendation rating from the United States Preventive Services Task Force (USPSTF). The latest USPSTF does not include a general screening for behavioral health. The USPSTF does have A and B recommendations for the following screenings related to behavioral health:

- Screening for unhealthy alcohol use
- Screening for unhealthy drug use
- Screening for tobacco use for adults, including pregnant women
- Screening for adult depression
- Screening for perinatal depression
- Screening for major depressive disorder in adolescents

Recommendations not meeting the “A” or “B” rating include the following:

- Screening for Autism spectrum disorder in young children
- Screening for Suicide Risk in Adolescents, Adults and Older Adults

The Mandated Health Benefits Advisory Commission Act (N.J.S.A. 17B:27D-1 et seq.) tasks the Commission with providing an independent analysis of the social, medical, and financial impact
of proposed legislation referred to it for review. The Act does not ask the Commission to recommend whether or not to enact the legislation, and the Commission does not do so here. The MHBAC prepared this report using its own resources, including staff from the New Jersey Department of Banking and Insurance. Commission members contributed their professional expertise, on a voluntary basis, in helping to shape the presentation of this report, analyzing published research, and drafting and editing its various sections. The MHBAC has sought to include information from a number of reputable sources that it found credible but recognizes that opinions and analyses may differ.

LEGISLATIVE HISTORY

In the Assembly, A376 was introduced on January 14, 2020 and was referred to the Assembly Financial Institutions and Insurance Committee. In the immediately prior session, the predecessor version of the bill, A5989, was introduced on November 25, 2019 and referred to the same committee. As of the date of the issuance of this report, the Assembly has not considered the bills.

In the Senate, S1240, the Senate version of A376, was introduced February 3, 2020 and was referred to the Senate Commerce Committee. As of the date of the issuance of this report, the Senate has not considered the bills. There have not been any fiscal notes published for any of the bills.

SOCIAL IMPACT

Prevalence of Mental Illness and Substance Abuse in Adults

The National Institute of Mental Health (NIMH) estimates that 51.5 million adults over the age of 18, or 20.6% of the population suffer from a mental illness. NIMH differentiates between Any Mental Illness (AMI) and Serious Mental Illness (SMI), the former defined as “a mental, behavioral, or emotional disorder which can be varied in its impact,” and the latter as “a mental, behavioral or emotional disorder resulting in serious functional impairment which substantially interferes with or limits one or more major life activities.”

The prevalence of AMI is higher among females (24.5%) than males (16.3%) and occurs most frequently in young adults 18 to 25 years of age, and among those reporting two or more races, demographically. In 2019, 43.8% of U.S. adults with AMI and 65.5% of the 13.1 million Americans with SMI received mental health treatment, among them, more adults older than 26 than those aged 18 to 25, and about half of those identifying as female, gay, lesbian, bisexual and
transgender, or non-Hispanic whites. Data from the 2019 National Comorbidity Survey of Adolescents Aged 13-19, determined that 49.5% of this population had AMI and 22% had SMI based on DSM-IV criteria.

The National Alliance for Mental Illness (NAMI) delineates the frequency of mental illness in U.S. adults aged 18 and older by condition:

- Schizophrenia: <1%: 1.5 million people
- Obsessive-Compulsive Disorder: 1.2%: 3 million people
- Borderline Personality Disorder: 1.4%: 3.5 million people
- Bipolar Disorder: 2.8%: 7 million people
- Post Traumatic Stress Disorder: 3.6%: 9 million people
- Major Depressive Disorder: 7.8%: 19.4 million people
- Anxiety Disorder: 19.1%: 48 million people

Perinatal depression is a common and often unrecognized condition during pregnancy and the postpartum period affecting 10-20% of pregnant women. In 2018, the National Survey of Drug Use and Health determined that approximately 20.3 million people ages 12 and older had a substance abuse disorder, including 14.8 million with an alcohol use disorder, and 8.1 million with an illicit drug use disorder; the most common substance involved in illicit drug use was marijuana. Approximately 2.1 million Americans have an opioid use disorder, nearly 1 million are addicted to methamphetamine, and about 34 million smoke cigarettes. Obtaining treatment for these disorders, regardless of type, remains a challenge. For example, only 8% of those with alcohol use disorder had received treatment for their condition in 2018. Treatment is complicated by a nationwide scarcity of mental health clinicians -- in 2019, for example, 60% of U.S. counties had no practicing psychiatrist -- and in some cases, by a lack of health insurance coverage: In 2019, 10.9% of U.S. adults with AMI had no insurance coverage, and 11.9% of U.S. adults with SMI had no insurance coverage. The average delay between the onset of mental illness symptoms and treatment in the U.S. is 11 years.

Mental health and substance abuse disorders add to the burden of care in the U.S: patients with these disorders are involved in 1 out of 8 emergency room visits/year, and mood disorders are the most common cause of hospitalizations for all people in the U.S. under age 45 (aside from pregnancy and birth). It is estimated that serious mental illness causes $193.2 billion in lost revenue/year. The community impact of mental illness is reflected in the fact that 20.5% of those experiencing homelessness have a serious mental illness, 37% of those incarcerated in state and
federal U.S. prisons have a diagnosed mental illness, and 70.4% of youths in the juvenile justice system and 41% of patients in the Veteran’s Health Administration have serious mental illness. In 2018, 23.6% of adults with any mental illness perceived unmet need for their mental health care; the most common expressed reason for not receiving mental health services was that the cost of care was unaffordable.

Between 1999 and 2006, suicide rates in the U.S. among all ages increased at about 1%/year; between 2006 and 2018, the rates increased at about 2%/year. Suicide is the 10th leading cause of death in the U.S. in all age groups, and the 2nd leading cause of death for ages 10 to 34. Between 1999-2018, the rates were highest for females between 45-64 and for males aged 75 and older. In 2018, suicide rates were higher in most rural communities than in most urban communities. Beyond the immediate risk for higher mortality, individuals with depression are at higher risk for some chronic diseases including cardiovascular disease, diabetes, Alzheimer’s disease and osteoporosis. Conversely, patients with many chronic diseases are at higher risk for depression, including but not limited to: cancer, coronary artery disease, stroke, Parkinson’s disease, HIV-AIDS, multiple sclerosis and rheumatoid arthritis.

**Prevalence of Mental and Behavioral Health Conditions in Children**

A study using national survey data from 2015 found that roughly 4% of children ages 4 to 7 had serious emotional or behavioral difficulties, with 6% of children ages 8 to 10 having these serious problems, and 8% of children ages 11 to 14 having serious emotional or behavioral difficulties. Similar studies have found that among children ages 6 to 11, another 17% have less severe emotional or behavioral difficulties. Strong evidence establishes the negative impact of these emotional and behavioral problems on math and reading scores and school dropout rates.

“Attention deficit hyperactivity disorders (ADHD), behavioral problems, anxiety and depression are the most commonly diagnosed mental health disorders in children.” Other childhood mental and behavioral health disorders include oppositional-defiant disorders, obsessive-compulsive disorders, conduct disorders, Tourette’s syndrome and post-traumatic stress disorders. Conditions that can be associated with mental health and behavioral disorders are autism spectrum disorders, developmental disorders, learning disorders, language disorders and disorders of substance abuse. It is estimated that 20 to 25 percent of youth in the United States will meet criteria for a mental health disorder with severe impairment (defined by endorsement of "a lot" or "extreme" impairment in daily activities or "severe or very severe" distress) during their lifetime.
MEDICAL EVIDENCE

The primary purpose of screening tests is to detect early disease or risk factors for disease in large numbers of apparently healthy individuals. The purpose of a diagnostic test is to establish the presence (or absence) of disease as a basis for a treatment decision in symptomatic or screen positive individuals (i.e., a confirmatory test).xx

Mental (or behavioral) health conditions are a large, and varied group of conditions as referenced in the current version of DSM-5. It is estimated that 8% of Americans aged 12 years and older suffer from depression, and a 2015 study estimated that 16.1 million adults had at least one major depressive episode in the previous year.xxi A related study of anxiety disorders in adolescent and adult women found that 40% of women experience an anxiety disorder in their lifetimes, while 23% had suffered an anxiety disorder in the past year. The authors reported that there was insufficient empirical evidence to support a recommendation to screen all adolescent and adult women for anxiety disorders.xxii

There are multiple screening tools employed in medical practice, each testing for different categories of the Behavioral Health conditions. Some examples of the most commonly used screening tools for adults are PHQ2 and PHQ9 for Depression screening, the Geriatric Depression Screening tool (GSD15), GAD7 for Anxiety, CAGE for substance abuse disorder, MMSE and SLUMS for cognitive decline and dementia, and the Edinburgh Postpartum Depression Scale (EPDS) in perinatal women.

There is utility in identifying individuals with behavioral health conditions and engaging them in effective treatment. Screening tools are best utilized in the primary care (e.g., Family Medicine, General Internal Medicine, Pediatric, and in some cases, OBGYN) medical practice setting, where patients identified with behavioral health conditions might begin and/or be referred for early counseling and medication therapy. However, performing screening tests in these settings may be made difficult because of limitations in the primary care clinician’s time. A time-motion study of nearly 1,000 primary care physician visits in 2018, found that the average face-to-face time physicians spend with patients is 11.2 minutes, including 9.2 minutes of physician to patient interaction, and 2 minutes of contributing to the Electronic Health Record (EHR); an additional 18.6 minutes was spent on the EHR, outside of the patient visit.xxiii Some screening may be initiated by practice support staff, such as Medical Assistants, Social Workers, LPN/RNs, and Advanced Practice Clinicians; some screening tests are self-administered and can be completed by patients in the waiting area prior to an in-person visit.

Developmental surveillance is the process through which children with developmental delay or who are at risk for developmental delay are identified. It is an essential component of routine well-child care and consists of eliciting and attending to parental concerns, maintaining a developmental history, observing parent-child interactions, identifying risk and protective factors, collaborating with other professionals, and formulating findings and plans. Developmental-behavioral screening refers to the use of a standardized test to identify asymptomatic children at risk for a developmental disorder; children who screen positive should undergo developmental-behavioral evaluation. Screening enhances clinical impressions formed through developmental surveillance.
Ideally, screening tools should be valid and reliable, brief, and low-cost. A376 mandates an annual screening for mental health conditions, suggesting a screening for overall mental health. Examples of such evidence-based tools to screen for overall mental health in adults and youth are in Tables 1 and 2.

Given time constraints, primary care clinicians may be more likely to use screening tools for specific conditions, like anxiety, major depression (adult or youth), perinatal depression or substance abuse, than for overall mental health, particularly since those are conditions which fall within the USPSTF recommendations. Brief, validated screening tools to assess most of these conditions are summarized in several recent articles along with links to the resources for clinician’s use. xxiv xxv The Edinburg Postnatal Depression Scale is an evidenced-based screening tool effective in determining depression in the perinatal period and is widely used in OBGYN practices in the U.S. xxvi

Choice of screening should be based on primary care clinician judgment, knowledge of the patient’s social and medical conditions, as well as past history of any behavioral health diagnoses, in the context of presenting conditions. It is important for any behavioral health screening performed during the course of a year to be a benefit covered by a commercial or government insurance product. It is also crucial that there is an available and effective network of behavioral health clinicians to support primary care clinicians. There is often need for prompt additional care of patients who have been identified with a behavioral health condition after screening and early treatment, or there could be the potential for harm to such patients. xxvii Leon and colleagues point out that, “[A]lthough the predictive values of screens for specific mental health disorders are in line with those of other medical screens, false positive results are
Developmental and behavioral surveillance is recommended for all children during preventive health care visits. In the United States, periodic developmental-behavioral screening is also recommended. USPSTF recommends screening for major depressive disorders (MDD) in adolescents age 12 to 18 years. Screening should be implemented with adequate systems in place to ensure accurate diagnosis, effective treatment, and appropriate follow-up. The USPSTF also concludes that the current evidence is insufficient to assess the balance of benefits and harms of screening for MDD in children aged 11 or younger.xxix

Developmental disabilities (also called developmental disorders) are a heterogeneous group of conditions caused by impairments in learning, language, behavior, or motor skills. Examples include intellectual disability, autism spectrum disorder, attention deficit hyperactivity disorder, cerebral palsy, and hearing impairment.xxx Developmental screening refers to the use of a standardized test to identify asymptomatic children who are at risk for a developmental disorder; children who screen positive should undergo a developmental-behavioral evaluation.xxxi

The benefits of developmental-behavioral screening were demonstrated in a multicenter randomized trial that compared developmental screening using validated screening tests (Ages & Stages Questionnaire-II and Modified Checklist for Autism in Toddlers) with office assistance, validated tools without office assistance, and milestone-based developmental surveillance in 2103 children <30 months of age.xxxii

Children who screen positive but whose developmental-behavioral evaluation does not identify a developmental-behavioral condition may benefit from more frequent follow-up, psychosocial supports, or primary care interventions.xxxiii In a systematic review of 48 studies, several primary care interventions for children younger than three years were associated with reduction in developmental delay (Healthy Steps, Video Interaction Project), improved cognitive or language development (Parenting Intervention, Care For Development, Touchpoints), and improved behavior (Incredible Years, Positive Parenting Program, Parent-Child Interaction Therapy, PriCARE, Video Interaction Project).

OTHER STATES

The MHBAC did not identify any other states with such broad proposed mandates on mental and behavioral health screening. The National Alliance on Mental Illness (NAMI) established a number of specific areas in which states could make meaningful progress on mental health. These areas included:

- State Mental Health Budgets
- Medicaid and Medicaid Expansion
• Insurance Parity
• Workforce
• Children and Youth
• First Episode Psychosis: Early Intervention
• Inpatient and Crisis Care
• Civil Commitment and Court-Ordered Treatment
• Criminal Justice
• Suicide Prevention
• Housing and Employment

North Carolina, for example, chose to focus its legislative efforts on youth suicide prevention in 2019. Among the provisions contained in that legislative package was a proposal to expand mental health screenings of adolescents to identify those at greater risk of suicide.

Another study examined state requirements for childhood screening and elementary school form reporting on a set of 7 variables intended to measure health barriers to learning. For the 50 states and the District of Columbia, mandatory screening and school reporting was very low on all the measures, under 25% of all states, even for the measures with the highest number of state requirements. Last session, New Jersey considered legislation, S2835 (Singleton)/A3926, which would have required public schools to administer written screenings for depression for students in certain grades. The bill passed both houses, but was pocket vetoed. Only 10 states and the District of Columbia had any kind of mandatory testing and school reporting for mental health or well-being, roughly the same as the number requiring screenings and reporting for vision, hearing, dental pain, and asthma. The results are presented in Table 3.

Source: https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0190254
The authors point out, however, that approximately 19% of American children aged 6 to 11 did not have an annual checkup in the previous year.

**DISCUSSION**

Mental illness or mental health conditions/disorders refers to a wide range of disorders that can affect mood, thinking, and behavior. Examples of mental health illness include depression, anxiety disorders, schizophrenia and associated disorders, bipolar disorders, eating disorders, and addictive behaviors that can include substance abuse disorders. Developmental surveillance and screening for developmental/behavioral problems starts in childhood, however the development of mental illness can occur at any age.

The combination of developmental surveillance and screening for developmental-behavioral problems increases early identification, enabling early intervention, which is associated with improved outcomes. Early identification also permits earlier treatment of underlying medical conditions that present with developmental-behavioral problems. Perceived potential harms of screening include unnecessary referrals for developmental-behavioral evaluation, undue anxiety or stigma for families, missed or delayed diagnosis, and increased burden (e.g., time, documentation) for pediatric practices.

The empirical evidence suggests that mental health screening and follow up referrals for mental health care for children and adults is inadequate. A survey of 33,653 primary care physician-patient encounters, for example, showed less than 5% of adults were screened for depression.xxxviii Another study examined the screening and referral practices of a group of pediatric primary care clinicians (PCCs, also known as PCPs) before and after intensive training in their use. The authors reported that before the intervention, the PCCs were using mental health screening for about 1% of their pediatric patients. This was consistent with their finding that, “[O]ver half of PCPs report never or rarely using a standardized [mental health] screening tool.” While that percentage rose significantly with the intervention (to about 74%), it required 15 months of sustained training and intervention. The PCCs identified a number of barriers to using mental health screening and referrals, including time constraints in patient appointments, insufficient reimbursements, inadequate referral resources, and a paucity of partnerships with mental health clinicians. xl Psychiatric Advanced Practice Nurses in New Jersey describe reports from patients waiting 3 to 6 months for mental health care, with waits being the longest in underserved areas, like Cumberland County. xli

Another study examined the outcomes when commercially insured adolescent patients were identified as requiring follow up care after a positive finding from a mental health screening. The findings were not encouraging. The researchers reported that even with a positive finding from a mental health screening, only 54% of the insured adolescent patients were referred for mental health treatment. Furthermore, only 67% of the patients who were referred accepted the referral. Finally, of that group of patients who accepted mental health treatment referrals, only 18% actually had face-to-face mental health appointments in the 180 days following their referrals.xlii These findings suggest that the use of mental health screening tools and attention to
referrals to follow up mental health care cannot guarantee that patients will seek the care they need, even with a positive finding from a mental health screening and commercial insurance coverage.

FINANCIAL IMPACT

In assessing the financial impact of the proposed mental health screening legislation, the Mandated Health Benefits Advisory Commission is limited by the absence of a fiscal note on this bill by New Jersey’s Office of Legislative Services. Furthermore, since no other state has proposed comparable legislation mandating insurance coverage for annual comprehensive mental and behavioral health screening, there are no other state models of the financial impact of such a bill.

The MHBAC estimates that the proposed insurance mandate would cover about 15% of New Jersey residents, although coverage for the School Employees’ Health Benefits Program is not expressly included in the bill’s language. Current Federal insurance mandates for mental and behavioral health screenings are tied, through the Affordable Care Act, to the recommendations of the US Preventive Services Task Force (USPSTF). The USPSTF’s A & B recommendations for mental and behavioral health screenings, therefore, are already covered. Any mental or behavioral health screenings beyond the existing insurance mandates, therefore, would be for screening tools not considered to have sufficient empirical evidence to justify their use, according to the USPSTF.

The language of A376 is broad and general. The exact meaning of annual mental and behavioral health screenings, beyond those already covered under the ACA, is unclear. There are a variety of mental and behavioral health screening tools, for example, even for the same diagnostic purpose, each demanding differing amounts of time and expertise of primary care practitioners. Since the definition and intent of the expanded screenings is vague, it is impossible for the MHBAC to estimate a cost for this bill.

CONCLUSION

Balancing Social Impact, Medical Evidence, and Financial Impact

The literature clearly demonstrates that mental and behavioral health problems are a serious challenge to the well-being of children, adolescents, and adults in New Jersey and the United States. Existing mental and behavioral health insurance coverage mandates under the ACA are tied to the A & B recommendations of the USPSTF. A376 contains language intended to expand
insurance mandates for a subset of covered lives in New Jersey. The issue is defining precisely what is intended in broadening annual mental and behavioral health screenings beyond the empirically proven and clearly defined screening tools currently covered. This lack of precision makes it difficult to assess which screening tools satisfy the bill’s intentions and makes it impossible to quantify the financial impact of such an expanded insurance mandate.

The bill’s emphasis on expanding the use of mental and behavioral health screenings also overlooks the impact of increased demands on primary care clinicians. The research finds that PCCs are already under serious time constraints, in terms of the number of minutes they can allocate in face-to-face meetings with patients. Many PCCs report rarely using such mental and behavioral health screening tools and cite the barriers to using them consistently (e.g., time demands, documentation requirements, reimbursement rates/payments, limited mental health referral options, and a lack of familiarity with mental health colleagues).

It is not clear that an expanded insurance coverage mandate for screenings will actually result in better treatment and outcomes for patients suffering from mental and behavioral health problems. The empirical evidence does not suggest that significantly more patients will actually be screened for these conditions, and it is not clear that patients receiving positive mental and behavioral health screenings will actually receive referrals for further treatment. Furthermore, the evidence suggests that referrals don’t necessarily lead to a majority of patients having face-to-face mental and behavioral health follow up appointments with care practitioners. In summation, increased evidence-based screening can not only identify specific mental health conditions, but it can give a better sense of their scope. Screening, however, does not establish a clear path to more widespread and effective treatment of the problems identified for a number of reasons described in this report, including an insufficient number of mental health clinicians.

ASSEMBLY, No. 376

STATE OF NEW JERSEY

219th LEGISLATURE

PRE-FILED FOR INTRODUCTION IN THE 2020 SESSION

Sponsored by:
Assemblyman CHRISTOPHER P. DEPHILLIPS
District 40 (Bergen, Essex, Morris and Passaic)
Assemblywoman VALERIE VAINIERI HUTTLE
District 37 (Bergen)
Assemblyman JON M. BRAMNICK
District 21 (Morris, Somerset and Union)

Co-Sponsored by:
Assemblywomen Murphy, B.DeCroce and Dunn

SYNOPSIS
Requires health insurance coverage for annual mental health screening.

CURRENT VERSION OF TEXT
Introduced Pending Technical Review by Legislative Counsel.

(Sponsorship Updated As Of: 3/16/2020)
AN ACT concerning insurance coverage of mental health screenings and amending various parts of the statutory law.

BE IT ENACTED by the Senate and General Assembly of the State of New Jersey:

1. Section 1 of P.L.1999, c.106 (C.17:48-6v) is amended to read as follows:

   1. a. (1) Every individual and group hospital service corporation contract that provides hospital or medical expense benefits and is delivered, issued, executed or renewed in this State pursuant to P.L.1938, c.366 (C.17:48-1 et seq.), or approved for issuance or renewal in this State by the Commissioner of Banking and Insurance, on or after the effective date of this act shall provide coverage for mental health conditions and substance use disorders under the same terms and conditions as provided for any other sickness under the contract and shall meet the requirements of the federal Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act of 2008, 42 U.S.C. s.18031(j), and any amendments to, and federal guidance or regulations issued under that act, including 45 C.F.R. Parts 146 and 147 and 45 C.F.R. s.156.115(a)(3).

   Coverage shall include, but not be limited to, an annual screening for mental health conditions.

   (2) As used in this section:

   "Mental health condition" means a condition defined to be consistent with generally recognized independent standards of current medical practice referenced in the current version of the Diagnostic and Statistical Manual of Mental Disorders.

   "Same terms and conditions" means that the hospital service corporation cannot apply more restrictive non-quantitative limitations, such as utilization review and other criteria or more quantitative limitations such as copayments, deductibles, aggregate or annual limits or benefit limits to mental health condition and substance use disorder benefits than those applied to substantially all other medical or surgical benefits.

   "Substance use disorder" means a disorder defined to be consistent with generally recognized independent standards of current medical practice referenced in the most current version of the Diagnostic and Statistical Manual of Mental Disorders.

   b. (Deleted by amendment, P.L.2019, c.58)

   c. The provisions of this section shall apply to all contracts in which the hospital service corporation has reserved the right to change the premium.

EXPLANATION – Matter enclosed in bold-faced brackets [thus] in the above bill is not enacted and is intended to be omitted in the law.

Matter underlined thus is new matter.
d. Nothing in this section shall reduce the requirement for a
hospital service corporation to provide benefits pursuant to section
1 of P.L.2017, c.28 (C.17:48-6nn).
(cf: P.L.2019, c.58, s.1)

2. Section 2 of P.L.1999, c.106 (C.17:48A-7u) is amended to
read as follows:

2. a. (1) Every individual and group medical service
corporation contract that provides hospital or medical expense
benefits that is delivered, issued, executed or renewed in this State
pursuant to P.L.1940, c.74 (C.17:48A-1 et seq.), or approved for
issuance or renewal in this State by the Commissioner of Banking
and Insurance, on or after the effective date of this act shall provide
coverage for mental health conditions and substance use disorders
under the same terms and conditions as provided for any other
sickness under the contract and shall meet the requirements of the
federal Paul Wellstone and Pete Domenici Mental Health Parity and
Addiction Equity Act of 2008, 42 U.S.C. s.18031(j), and any
amendments to, and federal guidance or regulations issued under
that act, including 45 s.C.F.R. Parts 146 and 147 and 45 C.F.R.
s.156.115(a)(3).
Coverage shall include, but not be limited to, an annual
screening for mental health conditions.

(2) As used in this section:
"Mental health condition" means a condition defined to be
consistent with generally recognized independent standards of
current medical practice referenced in the current version of the
Diagnostic and Statistical Manual of Mental Disorders.
"Same terms and conditions" means that the medical service
corporation cannot apply more restrictive non-quantitative
limitations, such as utilization review and other criteria or more
quantitative limitations such as copayments, deductibles, aggregate
or annual limits or benefit limits to mental health condition and
substance use disorder benefits than those applied to substantially
all other medical or surgical benefits.
"Substance use disorder" means a disorder defined to be
consistent with generally recognized independent standards of
current medical practice referenced in the most current version of
the Diagnostic and Statistical Manual of Mental Disorders.

b. (Deleted by amendment, P.L.2019, c.58)
c. The provisions of this section shall apply to all contracts in
which the medical service corporation has reserved the right to
change the premium.

d. Nothing in this section shall reduce the requirement for a
medical service corporation to provide benefits pursuant to section
2 of P.L.2017, c.28 (C.17:48A-7kk).
(cf: P.L.2019, c.58, s.2)
3. Section 3 of P.L.1999, c.106 (C.17:48E-35.20) is amended to read as follows:

3. a. (1) Every individual and group health service corporation contract that provides hospital or medical expense benefits and is delivered, issued, executed or renewed in this State pursuant to P.L.1985, c.236 (C.17:48E-1 et seq.), or approved for issuance or renewal in this State by the Commissioner of Banking and Insurance, on or after the effective date of this act shall provide coverage for mental health conditions and substance use disorders under the same terms and conditions as provided for any other sickness under the contract and shall meet the requirements of the federal Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act of 2008, 42 U.S.C. s.18031(j), and any amendments to, and federal guidance or regulations issued under that act, including 45 C.F.R. Parts 146 and 147 and 45 C.F.R. s.156.115(a)(3).

Coverage shall include, but not be limited to, an annual screening for mental health conditions.

(2) As used in this section:

"Mental health condition" means a condition defined to be consistent with generally recognized independent standards of current medical practice referenced in the current version of the Diagnostic and Statistical Manual of Mental Disorders.

"Same terms and conditions" means that the health service corporation cannot apply more restrictive non-quantitative limitations, such as utilization review and other criteria or more quantitative limitations such as copayments, deductibles, aggregate or annual limits or benefit limits to mental health condition and substance use disorder benefits than those applied to substantially all other medical or surgical benefits.

"Substance use disorder” means a disorder defined to be consistent with generally recognized independent standards of current medical practice referenced in the most current version of the Diagnostic and Statistical Manual of Mental Disorders.

b. (Deleted by amendment, P.L.2019, c.58)

c. The provisions of this section shall apply to all contracts in which the health service corporation has reserved the right to change the premium.

d. Nothing in this section shall reduce the requirement for a health service corporation to provide benefits pursuant to section 3 of P.L.2017, c.28 (C.17:48E-35.38).

cf: P.L.2019, c.58, s.3)

4. Section 4 of P.L.1999, c.106 (C.17B:26-2.1s) is amended to read as follows:

4. a. (1) Every individual health insurance policy that provides hospital or medical expense benefits and is delivered, issued, executed or renewed in this State pursuant to chapter 26 of Title 17B of the New Jersey Statutes, or approved for issuance or
renewal in this State by the Commissioner of Banking and
Insurance, on or after the effective date of this act shall provide
coverage for mental health conditions and substance use disorders
under the same terms and conditions as provided for any other
sickness under the contract and shall meet the requirements of the
federal Paul Wellstone and Pete Domenici Mental Health Parity and
Addiction Equity Act of 2008, 42 U.S.C. s.18031(j), and any
amendments to, and federal guidance or regulations issued under
that act, including 45 C.F.R. Parts 146 and 147 and 45 C.F.R.
s.156.115(a)(3).

Coverage shall include, but not be limited to, an annual
screening for mental health conditions.

(2) As used in this section:

"Mental health condition" means a condition defined to be
consistent with generally recognized independent standards of
current medical practice referenced in the current version of the
Diagnostic and Statistical Manual of Mental Disorders.

"Same terms and conditions" means that the insurer cannot apply
more restrictive non-quantitative limitations, such as utilization
review and other criteria or more quantitative limitations such as
copayments, deductibles, aggregate or annual limits or benefit
limits to mental health condition and substance use disorder
benefits than those applied to substantially all other medical or
surgical benefits.

"Substance use disorder" means a disorder defined to be
consistent with generally recognized independent standards of
current medical practice referenced in the most current version of
the Diagnostic and Statistical Manual of Mental Disorders.

b. (Deleted by amendment, P.L.2019, c.58)

c. The provisions of this section shall apply to all policies in
which the insurer has reserved the right to change the premium.

d. Nothing in this section shall reduce the requirement for an
insurer to provide benefits pursuant to section 4 of P.L.2017, c.28
(C.17B:26-2.1hh).

(cf: P.L.2019, c.58, s.4)

5. Section 5 of P.L.1999, c.106 (C.17B:27-46.1v) is amended
to read as follows:

5. a. (1) Every group health insurance policy that provides
hospital or medical expense benefits and is delivered, issued,
executed or renewed in this State pursuant to chapter 27 of Title
17B of the New Jersey Statutes, or approved for issuance or renewal
in this State by the Commissioner of Banking and Insurance, on or
after the effective date of this act shall provide benefits for mental
health conditions and substance use disorders under the same terms
and conditions as provided for any other sickness under the policy
and shall meet the requirements of the federal Paul Wellstone and
Pete Domenici Mental Health Parity and Addiction Equity Act of
2008, 42 U.S.C. s.18031(j), and any amendments to, and federal
guidance or regulations issued under that act, including 45 C.F.R. Parts 146 and 147 and 45 C.F.R. s.156.115(a)(3).

Benefits shall include, but not be limited to, an annual screening for mental health conditions.

(2) As used in this section:

"Mental health condition" means a condition defined to be consistent with generally recognized independent standards of current medical practice referenced in the current version of the Diagnostic and Statistical Manual of Mental Disorders.

"Same terms and conditions" means that the insurer cannot apply more restrictive non-quantitative limitations, such as utilization review and other criteria or more quantitative limitations such as copayments, deductibles, aggregate or annual limits or benefit limits to mental health condition and substance use disorder benefits than those applied to substantially all other medical or surgical benefits.

"Substance use disorder" means a disorder defined to be consistent with generally recognized independent standards of current medical practice referenced in the most current version of the Diagnostic and Statistical Manual of Mental Disorders.

b. (Deleted by amendment, P.L.2019, c.59)

c. The provisions of this section shall apply to all policies in which the insurer has reserved the right to change the premium.

d. Nothing in this section shall reduce the requirement for an insurer to provide benefits pursuant to section 5 of P.L.2017, c.28 (C.17B:27-46.1nn).

(cf: P.L.2019, c.58, s.5)

6. Section 2 of P.L.1999, c.106 (C.17B:27A-7.5) is amended to read as follows:

6. a. (1) Every individual health benefits plan that provides hospital or medical expense benefits and is delivered, issued, executed or renewed in this State pursuant to P.L.1992, c.161 (C.17B:27A-2 et seq.) or approved for issuance or renewal in this State on or after the effective date of this act shall provide benefits for mental health conditions and substance use disorders under the same terms and conditions as provided for any other sickness under the health benefits plan and shall meet the requirements of the federal Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act of 2008, 42 U.S.C. s.18031(j), and any amendments to, and federal guidance or regulations issued under that act, including 45 C.F.R. Parts 146 and 147 and 45 C.F.R. s.156.115(a)(3).

Benefits shall include, but not be limited to, an annual screening for mental health conditions.

(2) As used in this section:

"Mental health condition" means a condition defined to be consistent with generally recognized independent standards of
current medical practice referenced in the current version of the Diagnostic and Statistical Manual of Mental Disorders.

"Same terms and conditions" means that the plan cannot apply more restrictive non-quantitative limitations, such as utilization review and other criteria or more quantitative limitations such as copayments, deductibles, aggregate or annual limits or benefit limits to mental health condition and substance use disorder benefits than those applied to substantially all other medical or surgical benefits.

"Substance use disorder" means a disorder defined to be consistent with generally recognized independent standards of current medical practice referenced in the most current version of the Diagnostic and Statistical Manual of Mental Disorders.

b. (Deleted by amendment, P.L.2019, c.58)

c. The provisions of this section shall apply to all health benefits plans in which the carrier has reserved the right to change the premium.

d. Nothing in this section shall reduce the requirement for a plan to provide benefits pursuant to section 6 of P.L.2017, c.28 (C.17B:27A-7.21).

(cf: P.L.2019, c.58, s.6)

7. Section 7 of P.L.1999, c.106 (C.17B:27A-19.7) is amended to read as follows:

7. a (1) Every small employer health benefits plan that provides hospital or medical expense benefits and is delivered, issued, executed or renewed in this State pursuant to P.L.1992, c.162 (C.17B:27A-17 et seq.) or approved for issuance or renewal in this State on or after the effective date of this act shall provide benefits for mental health conditions and substance use disorders under the same terms and conditions as provided for any other sickness under the health benefits plan and shall meet the requirements of the federal Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act of 2008, 42 U.S.C. s.18031(j), and any amendments to, and federal guidance or regulations issued under that act, including 45 C.F.R. Parts 146 and 147 and 45 C.F.R. s.156.115(a)(3).

Benefits shall include, but not be limited to, an annual screening for mental health conditions.

(2) As used in this section:

"Mental health condition" means a condition defined to be consistent with generally recognized independent standards of current medical practice referenced in the current version of the Diagnostic and Statistical Manual of Mental Disorders.

"Same terms and conditions" means that the plan cannot apply more restrictive non-quantitative limitations, such as utilization review and other criteria or more quantitative limitations such as copayments, deductibles, aggregate or annual limits or benefit limits to mental health condition and substance use disorder.
benefits than those applied to substantially all other medical or surgical benefits.

"Substance use disorder" means a disorder defined to be consistent with generally recognized independent standards of current medical practice referenced in the most current version of the Diagnostic and Statistical Manual of Mental Disorders.

b. (Deleted by amendment, P.L.2019, c.58)

c. The provisions of this section shall apply to all health benefits plans in which the carrier has reserved the right to change the premium.

d. Nothing in this section shall reduce the requirement for a plan to provide benefits pursuant to section 7 of P.L.2017, c.28 (C.17B:27A-19.25).

(cf: P.L.2019, c.58, s.7)

8. Section 8 of P.L.1999, c.106 (C.26:2J-4.20) is amended to read as follows:

8. a. (1) Every enrollee agreement delivered, issued, executed, or renewed in this State pursuant to P.L.1973, c.337 (C.26:2J-1 et seq.) or approved for issuance or renewal in this State by the Commissioner of Banking and Insurance, on or after the effective date of this act shall provide health care services for mental health conditions and substance use disorders under the same terms and conditions as provided for any other sickness under the agreement and shall meet the requirements of the federal Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act of 2008, 42 U.S.C. s.18031(j), and any amendments to, and federal guidance or regulations issued under that act, including 45 C.F.R. Parts 146 and 147 and 45 C.F.R. s.156.115(a)(3).

Health care services shall include, but not be limited to, an annual screening for mental health conditions.

(2) As used in this section:

"Mental health condition" means a condition defined to be consistent with generally recognized independent standards of current medical practice referenced in the current version of the Diagnostic and Statistical Manual of Mental Disorders.

"Same terms and conditions" means that the health maintenance organization cannot apply more restrictive non-quantitative limitations, such as utilization review and other criteria or more quantitative limitations such as copayments, deductibles, aggregate or annual limits or health care services limits to mental health condition and substance use disorder services than those applied to substantially all other medical or surgical health care services.

"Substance use disorder" means a disorder defined to be consistent with generally recognized independent standards of current medical practice referenced in the most current version of the Diagnostic and Statistical Manual of Mental Disorders.

b. (Deleted by amendment, P.L.2019, c.58)
c. The provisions of this section shall apply to enrollee agreements in which the health maintenance organization has reserved the right to change the premium.

d. Nothing in this section shall reduce the requirement for a health maintenance organization to provide benefits pursuant to section 8 of P.L.2017, c.28 (C.26:2J-4.39).

(see: P.L.2019, c.58, s.8)

9. Section 2 of P.L.1999, c.441 (C.52:14-17.29e) is amended to read as follows:

2. a. The State Health Benefits Commission shall ensure that every contract purchased by the commission on or after the effective date of this act that provides hospital or medical expense benefits shall provide coverage for mental health conditions and substance use disorders under the same terms and conditions as provided for any other sickness under the contract and shall meet the requirements of the federal Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act of 2008, 42 U.S.C. s.18031(j), and any amendments to, and federal guidance or regulations issued under that act, including 45 C.F.R. Parts 146 and 147 and 45 C.F.R. s.156.115(a)(3).

Coverage shall include, but not be limited to, an annual screening for mental health conditions.

b. The commission shall provide notice to employees regarding the coverage required by this section in accordance with this subsection and regulations promulgated by the Commissioner of Health pursuant to the "Administrative Procedure Act,” P.L.1968, c.410 (C.52:14B-1 et seq.). The notice shall be in writing and prominently positioned in any literature or correspondence and shall be transmitted at the earliest of: (1) the next mailing to the employee; (2) the yearly informational packet sent to the employee; or (3) July 1, 2000. The commission shall also ensure that the carrier under contract with the commission, upon receipt of information that a covered person is receiving treatment for a mental health condition or substance use disorder, shall promptly notify that person of the coverage required by this section.

c. Nothing in this section shall reduce the requirement for a carrier to provide benefits pursuant to section 9 of P.L.2017, c.28 (C.52:14-17.29u).

(see: P.L.2019, c.58, s.10)

10. This act shall take effect on the 90th day next following the date of enactment and shall apply to all contracts and policies delivered, issued, executed or renewed on or after that date.

STATEMENT

This bill requires health insurers (health, hospital, and medical service corporations, commercial individual and group health
insurers, health maintenance organizations, health benefits plans
issued pursuant to the New Jersey Individual Health Coverage and
Small Employer Health Benefits Programs, and the State Health
Benefits Program) to provide coverage for an annual mental health
screening.

The provisions of the bill will take effect 90 days after the date
of enactment and will apply to all health benefits plans issued or
renewed on or after that date.
September 29, 2020

New Jersey Mandated Health Benefits Advisory Commission
P.O. Box 525
Trenton, NJ 08625

Dear Members of the Commission:

As the Chairman of the Assembly Financial Institution and Insurance Committee, I respectfully request the Commission to review and prepare a written report of A-376, sponsored by Assemblyman Christopher DePhillips. The bill would require health insurance coverage for annual mental health screening.

If you have any questions, please do not hesitate to contact, Mark Iaconelli, Assembly Financial Institutions and Insurance Committee Aide, at 609-847-3500. Thank you for your immediate attention to this matter.

Very truly yours,

John F. McKeon, Esq.

CC: Hon. Christopher DePhillips
Mark Iaconelli, Jr., Esq., Committee Aide
